PROSTHETIC SERVICES

We offer a full spectrum of personalized services on an outpatient and inpatient basis for people recovering from amputation surgery. From crafting and fitting sturdy, light, functional, and comfortable limbs, to volume control, lifelong support, education, care and maintenance, our staff is here to help you throughout your recovery.

Our state-of-the-art on-site laboratory allows us to fabricate a perfectly fitted artificial limb, so that you can begin to return to your normal activities. We start with a detailed assessment, paying careful attention to your medical history and any conditions such as diabetes, skin concerns, and sensory issues that you may have.

The clinicians on your team will keep everyone updated on your progress, communicating with your vascular surgeon and primary care physician throughout the entire process.

Your ability to function after a stroke, traumatic brain injury, orthopedic or spinal cord injury, or a neurological impairment such as MS may improve dramatically with the help of a specialized brace.

Our experienced clinicians begin with a personalized assessment, discussing your expectations and concerns, and offering their professional advice on the design of your brace; they take the time necessary to customize and fabricate a comfortable, well fitting brace.

If you experienced an event several months or years ago, you may have “outgrown” your device, or you may benefit from a newer style, designed to address your current needs. We invite you to call us to schedule an appointment with our clinicians to discuss the option that is right for you.

Orthopedic Rehabilitation Systems is proud to offer specialized brace and prosthetic services to help people recover function. Our interdisciplinary staff designs a custom treatment program for each patient, paying special attention to comfort, fit and function. We invite you to visit our brace or prosthetic clinic to meet our dedicated staff and discover the variety of options available to you.
