## Comprehensive Care

Braintree Rehabilitation Hospital's team is a group of dedicated professionals with expertise in treating patients with bracing or prosthetic needs. Through a coordinated effort and close communication with our patients and their caregivers, we help maximize abilities and independence, while simplifying patient care.

Depending upon your needs, in addition to a Board Certified Physiatrist, your treatment team may also include:

- Physical Therapist
- Occupational Therapist
- Certified Prosthetist
- Certified Orthotist

Potential outcomes from your visit to the clinic may include a follow-up in one or more of these services:

- Tone Management Clinic
- Seating and Positioning Clinic
- Customized Bracing or Splinting
- Therapy Services
- Customized Prosthetic Limbs

## Brace Services

Your ability to function after a stroke, traumatic brain injury, orthopedic or spinal cord injury, or a neurological impairment such as MS may improve dramatically with the help of a specialized brace.

Our Multidisciplinary Team begins with a personalized assessment. They design your brace and take the time necessary to fabricate a comfortable, well fitting device.

If you experienced an event several months or years ago, you may have “outgrown” your device, and you may benefit from a newer style brace, designed to address your current needs.

## Prosthetic Services

We offer a full spectrum of personalized services for people recovering from amputation surgery. Our clinicians design, craft and fit sturdy, light, functional and comfortable limbs. They provide volume control strategies, lifelong support, education and maintenance of your artificial limb. Our staff is here to help you throughout your recovery.

Our Multidisciplinary Team approach allows us to fabricate a perfectly fitted artificial limb, so that you can begin to return to your normal activities. We start with a detailed assessment, paying careful attention to your medical history such as diabetes, skin concerns, and sensory issues that you may have.

The team will communicate with your vascular surgeon and primary care physician throughout the entire process.
